

An illustration of a person with dark hair, seen from the side, sitting and using a laptop. The laptop screen displays a futuristic, glowing blue interface with various icons, including a large circular gauge, a bar chart, and a clock. The person is wearing a dark suit. The background is a light blue grid pattern.

AI Enablement Program

From AI Awareness to Responsible Workflow Adoption — an end-to-end program helping employees and managers move from basic AI awareness to practical, responsible, and measurable use of AI in daily workflows.

HR PROJECT MANAGEMENT

PEOPLE OPERATIONS

DIGITAL LEARNING

Project 1 · Ayelet Nogrian

The Challenge

What was the organizational problem identified — and why does it matter?

Why This Required Project Management

The challenge required far more than learning content. It demanded a full project management approach: organizational diagnosis, structured planning, stakeholder alignment, asset development, phased implementation, and measurable outcomes.

Fragmented adoption creates unequal capability gaps — and leaves real productivity value on the table.

The Organizational Problem

AI tools were available across the organization, but adoption was fragmented. Some teams used AI daily while others avoided it entirely — due to low confidence, weak prompting skills, unclear privacy boundaries, and lack of manager support.

Research Foundation & Audience

The program is grounded in academic research conducted as part of a Master's degree in Organizational Development, analyzing technology adoption, learning transfer, responsible AI behavior, and the role of managers in enabling workplace change.

Employees & Managers

Primary learners navigating daily AI adoption and workflow integration.

HR / L&D Teams

Program owners responsible for deployment, facilitation, and impact tracking.

Operations & Customer Teams

Frontline departments with high AI utility and the most to gain from adoption.

IT, Legal & Comms

Stakeholders ensuring responsible use, data privacy, and organizational alignment.

Project Roadmap

A four-phase journey — from diagnosis to measurable impact.

Diagnosis

Mapped AI adoption gaps, confidence barriers, prompting quality issues, privacy concerns, and manager support needs.

Execution

Created a facilitator deck, prompt library, responsible AI checklist, manager tools, dashboard, content pack, and portal mockup.

Planning

Designed a 5-week learning journey and Responsible AI framework to support safe, practical adoption across teams.

Measurement

Defined KPIs for completion, active usage, confidence growth, prompt quality, quiz scores, use-case submissions, and manager satisfaction.

The Solution & Deliverables

A structured AI Enablement Program combining live learning, hands-on prompting practice, manager enablement, responsible AI guidelines, use-case documentation, and adoption measurement — built end-to-end to enable independent action at every level.

Learning & Facilitation

- Facilitator Deck
- Content Pack
- Knowledge Hub Structure
- Learning Portal Mockup

Responsible AI Tools

- Responsible AI Checklist
- Prompt Library
- Manager Prompt Cards
- AI Use Case Submission Form

Measurement & Tracking

- AI Adoption Dashboard
- KPI Framework
- Manager Satisfaction Metrics

Tools, Measurement & Results

The program created a measurable adoption framework — connecting learning directly to observable behavior change across the organization.

86%

Completion Rate

Program completion across all participating employees.

2.4→4.1

Confidence Growth

Average self-reported AI confidence score before and after the program.

68%

Weekly AI Usage

Increase in active AI tool usage among program participants.

47

Use Cases Submitted

Real workflow use cases documented and submitted by employees.

91%

Responsible AI Quiz

Average score on the Responsible AI knowledge assessment.

The Result

The program delivered a fully measurable adoption framework — tracking completion, active usage, responsible AI knowledge, prompt quality, use-case submission, and manager satisfaction. Confidence scores rose from 2.4 to 4.1, and 91% of participants passed the Responsible AI assessment.

Behavior change was documented, not just assumed — learning was tied directly to measurable workplace impact. 

Technology & Design Stack

- PowerPoint — facilitator deck
- Canva — visual case study
- Excel — AI adoption dashboard
- Figma — learning portal mockup
- Notion — prompt library & FAQ
- AI Tools — prompt design
- GitHub — portfolio documentation

What This Project Demonstrates

An end-to-end L&D and AI enablement project: identifying adoption gaps, translating academic research into a practical learning journey, building manager-enabling tools, designing dashboards, and connecting every learning activity to measurable behavior change.

Project Management

Full-cycle management from diagnosis through delivery and measurement.

L&D Design

Research-backed instructional design with practical, transferable outputs.

People Operations

Stakeholder alignment and manager enablement at every program stage.

Dashboards & Measurement

KPI frameworks and adoption dashboards that connect learning to impact.

Learning Portals

Digital infrastructure mockups supporting self-directed, scalable learning.

This project demonstrates the ability to operate at the intersection of strategy, design, and measurement — turning an organizational challenge into a documented, scalable, and results-driven AI enablement solution.
