

Global Conflict Management Enablement Program

Project type: Enablement program (Org Development, conflict management)

Scope: Global, cross-functional teams across time zones and cultures

Core outcome: Faster resolution, higher manager confidence, scalable mediation tools

Overview

Global teams often experience “invisible friction” — misunderstandings compound when teammates have limited overlap hours, different communication norms, and varying expectations about escalation, feedback, and decision-making. This program translates M.A.-level Organizational Development research into an applied enablement system that helps leaders and teams:

- Detect and de-escalate conflict early (before it becomes an operational blocker)
- Create a shared language for conflict styles across cultures
- Standardize mediation practices so outcomes are consistent across regions
- Reduce cycle time lost to async loops, rework, and misalignment

How it solves time-zone + culture friction

- **Async-first clarity:** lightweight rituals and templates that make intent, context, and decision rights explicit — reducing “handoff gaps” between regions.
- **Cultural translation:** practical prompts and facilitator guidance to surface assumptions (direct vs. indirect communication, hierarchy expectations, face-saving, etc.).

- **Manager enablement:** tools that turn “soft skills” into observable behaviors, checklists, and measurable outcomes.
-

The PM Roadmap

Phase 1 — Diagnosis

Goal: Understand where conflict is occurring, what amplifies it, and what leaders need to respond effectively.

Key activities

- Stakeholder interviews (people leaders, HR/OD partners, regional leads)
- Conflict theme analysis (root causes, escalation paths, high-friction interfaces)
- Time-zone workflow mapping (handoffs, latency points, escalation delays)
- Baseline measurement definition (resolution time, confidence, adoption)

Outputs

- Problem statement and success criteria
- Priority use cases (e.g., cross-region dependencies, matrix accountability, feedback conflict)
- Baseline metrics + measurement plan

Phase 2 — Strategy (CLEAR Framework)

Goal: Create a repeatable enablement strategy grounded in OD research and operational constraints.

CLEAR framework (program design)

- **C — Context:** Identify the conflict type, stakes, and constraints (time zones, power dynamics, cultural context).
- **L — Language:** Establish neutral, shared phrasing to reduce attribution and defensiveness.
- **E — Escalation:** Define escalation triggers and roles (when to facilitate, mediate, involve leadership/HR).
- **A — Alignment:** Drive explicit agreements on goals, ownership, and decision rights.

- **R — Resolution & Reinforcement:** Close with commitments, follow-through cadence, and learning capture.

Outputs

- Program narrative + operating model (who uses what, when, and why)
- Enablement architecture (facilitated workshops + self-serve tools + manager playbook)
- KPI tree linking behaviors → usage → outcomes

Phase 3 — Development (Figma / Excel)

Goal: Build high-utility artifacts that managers can use immediately and consistently.

Design + build

- **Figma:** Facilitator Deck (storyline, activities, templates, talk tracks, regional examples)
- **Figma / Docs:** Mediation Checklist (pre-work, live mediation steps, follow-up)
- **Excel:** Adoption + impact dashboard (usage signals, confidence pulse, time-to-resolution)

Principles

- Minimal cognitive load (tools usable in under 5 minutes)
- "One level deeper" guidance for tricky scenarios (power imbalance, recurring conflict, cultural tension)
- Metrics embedded in the workflow (so measurement is not an extra task)

Phase 4 — Impact

Goal: Drive sustained behavior change and validate impact with data.

Rollout + reinforcement

- Launch plan by region (pilot → scale), with leader sponsorship
- Manager office hours + peer learning loops
- Adoption nudges and playbook reminders tied to real workflows (1:1s, project retros, escalation paths)

Measurement

- Quantitative: resolution time, adoption rates, pulse confidence
 - Qualitative: manager feedback, case studies, “most useful tool” signals
 - Continuous improvement: monthly insights → iteration backlog
-

Deliverables

1. Facilitator Deck

Workshop-ready deck covering: conflict dynamics, cultural lenses, CLEAR framework, guided practice, and templated outputs.

2. Mediation Checklist

A step-by-step manager tool for preparation, live mediation, and follow-through — designed for consistency and psychological safety.

3. Excel Dashboard

A lightweight tracking system to monitor:

- Time-to-resolution (baseline vs. post-program)
 - Manager confidence pulse
 - Tool adoption by region/team
 - Top conflict themes + repeat cases
-

Impact

Measured outcomes (post-rollout vs. baseline)

- **-28% resolution time** (fewer stalled handoffs, faster de-escalation)
- **+45% manager confidence** in handling conflict (pulse survey uplift)
- **73% tool adoption** across targeted manager cohort

What these results indicate

- A standardized conflict operating model reduces escalation overhead and ambiguity.
- Managers adopt tools when they are **embedded in existing rituals** (1:1s, retros, escalation templates) and **designed for async reality**.

- Combining OD research with concrete artifacts (deck, checklist, dashboard) converts “soft” capability building into repeatable, measurable practice.

Professional Project Tracking (Quick Tables)

Workstreams & Ownership

Status	Key output	Owner	Scope	Workstream
Not started	Problem statement + KPI baseline		Interviews, theme analysis, baseline metrics	Diagnosis
Not started	Framework + playbook structure		Operating model, enablement architecture	Program design (CLEAR)
Not started	V1 deliverables		Deck, checklist, dashboard	Asset development
Not started	Regional launch plan		Pilot → scale, office hours, nudges	Rollout & adoption
Not started	Monthly insights + backlog		Pulse + adoption + impact review	Measurement & iteration

Weekly Execution Checklist

Notes	Risks to watch	Decisions needed	Top 3 priorities	Week
				W1
				W2

Comms Plan (Stakeholders)

Owner	Cadence	Channel	Message	Audience
			Program goals, expectations, sponsorship ask	Regional leaders

Owner	Cadence	Channel	Message	Audience
			How to use CLEAR tools in real workflows	People managers
			Escalation model + measurement alignment	HR/OD partners

For operational tracking, keep the tables above aligned with the databases (Tasks / Milestones / Stakeholders / RAID) below.

Project Management — Tasks

Create d	# Effort (hrs)	Due	Start	Priority	Phase	Owner	Status	Aa Task
